Q. What you know more about Angular & What is your strength ?

During your interview, you may be asked this question so the interviewer can gauge what you know about the framework. Keep your answer brief and include your understanding of how Angular works.

Since there are various applications of Angular, the interviewer may want to know that you have a solid understanding of the differences between each version. In your answer, you might highlight your experience working between the different versions of Angular.

Example: *"The biggest differences between Angular and AngularJS, or Angular JavaScript, that I have found are within the command and operating languages and architectures of each application. Angular uses TypeScript language with command components and directives, whereas AngularJS relies on JavaScript language and the MVC design model to run."*

"Data binding can be one of the most important features of Angular. This is because data binding allows for communication between the DOM that you're developing and the components, and it consists of four main forms. The forms are two-way, property, event and string interpolation data binding."
